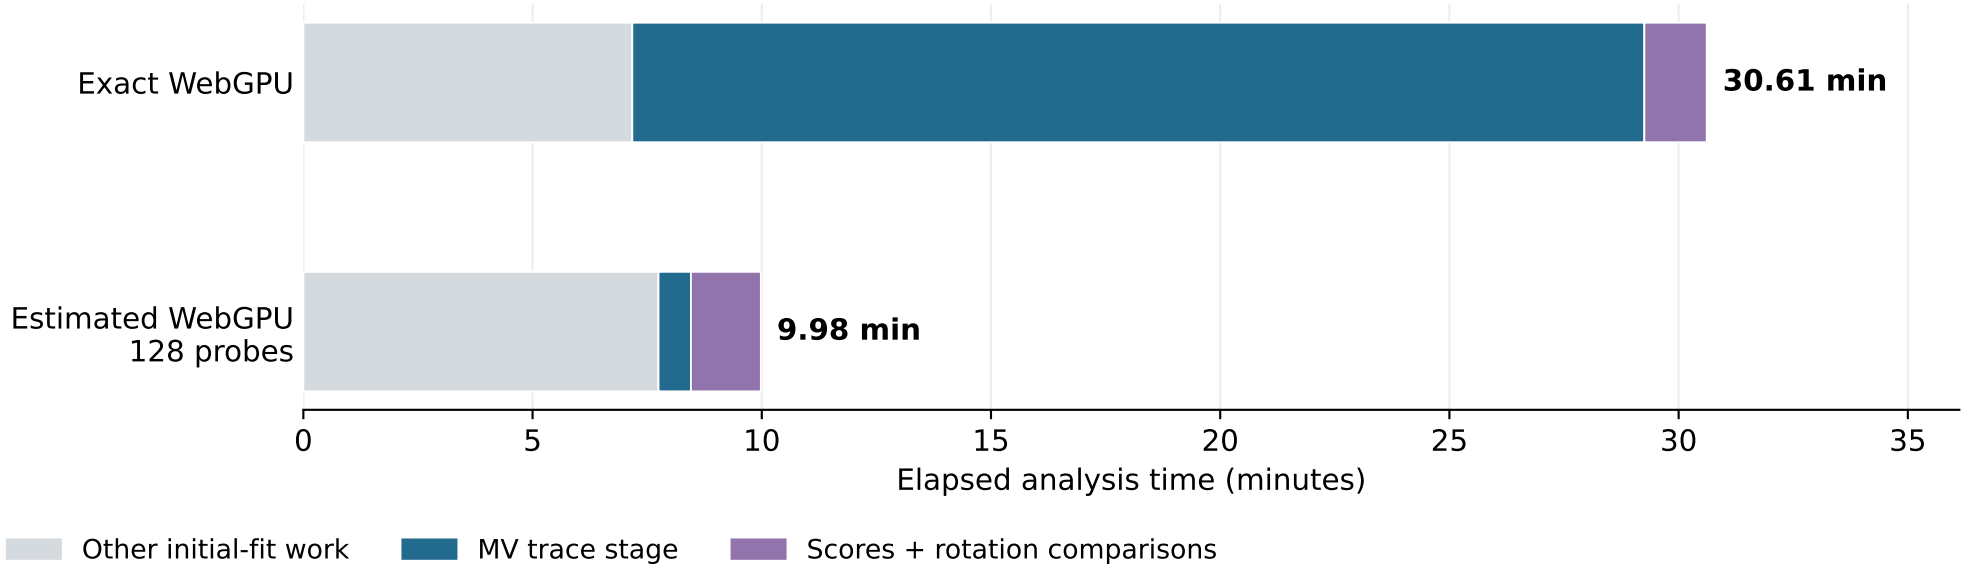
Fresh full-fit pair: 20,000 respondents × 500 items

Five factors · identical synthetic input · 3.07× total speedup in this pair



Second-trace relative error: +0.0504% | corrected χ^2 change: -0.011

Matched correlations, loadings, factor correlations, communalities, standard errors and scores passed parity.

One sequential pair, exact then estimated; fresh browser + service for each, including numerical self-checks.
Totals include a cold oblimin fit, scoring and cached promax/varimax comparisons. Browser launch and input generation excluded.
Apple M1 · 8 GiB · ordinary Chrome; interactive applications remained available. These are not repeated idle-machine estimates.
